We are here to service our patients the best way we know how. We understand the value of health insurance. However, because insurance plans are intended only to supplement out of pocket expenses for care, it may not cover all the care you need, ie. X-Rays. We will verify your applicable insurance benefits and report the supplemental coverage to you.

Our relationship is with each patient individually, not the insurance companies. If we believe that we may be able to help you and we accept your case, our recommendation will be based on what we believe is best for you – supported by our experience. We take great care in making our services affordable, as well as, accepting health insurance coverage.

How did you find our clinic? _____

Today we will conduct a thorough history, consultation and preliminary screening. If we believe we can help you, we may recommend other diagnostic testing necessary to evaluate your condition. If we believe that you will not respond to our care, we will not accept your case and may refer you to another provider.
